

Delta Uranium to drill uranium targets on its Deer Lake properties

October 29, 2009

TSX: DUR

Toronto, Ontario - **Delta Uranium Inc. (TSX: DUR)** ("**Delta**" or the "**Corporation**") announces that it intends to commence up to 1,000 meters of diamond drilling on its Deer Lake uranium project in western Newfoundland. Drilling on the Incinerator Road zone is expected to start by November 1st, 2009.

Uranium mineralization at Incinerator Road is hosted in a series of carbonate rocks of Carboniferous age, just above the unconformity where they rest on top of older basement rocks. Airborne radiometric anomalies and surface showings of uranium are scattered along an 8 kilometre length of the unconformity. The best exposed area of mineralization is at the Dan Showing, where trenching during the summer of 2009 has exposed mineralization along a strike length of 700 metres. Assays of up to 0.13% U₃O₈ have been returned from grab samples taken from trenches.

Previous drilling by Spruce Ridge Resources Ltd. (TSX-V: SHL). In 2007 intersected uranium mineralization in six out of nine diamond drill holes. Intersections included averages of 175 ppm U₃O₈ over 3.30 metres and 99 ppm U₃O₈ over 7.94 metres, both holes being vertical.

Discrepancies between radiometric readings and chemical assays have suggested the possibility that some uranium may have been leached out of the rocks. The rocks are permeable and exposed high on a hillside, and may have been affected by leaching due to permeation by rainwater. The planned diamond drill holes are situated down dip, where it is expected that the rocks hosting mineralization will be unweathered and uneroded.

Wayne Isaacs, Chairman & CEO of Delta states that, "*Although our priority remains our Wheeler River project in the Athabasca Basin, we believe that we have delineated what appears to be some very high value drill targets in this known area of uranium mineralization. We are well positioned in Deer Lake and we believe that the area will become an active area of uranium exploration in the near future, as we can see from more recent activity by such companies as Altius Minerals and JNR Resources.*"

Altius Minerals Corp. trades on the TSX under the ticker "ALS" and JNR Resources Inc. trades on the TSX Venture Exchange under the ticker "JNN".

Qualified Person

Technical information in this news release has been prepared and/or reviewed by Colin Bowdidge, Ph.D., P.Geo., a Qualified Person as defined by NI 43-101, and vice-president of exploration for the company.

About Delta Uranium Inc.

Delta Uranium is TSX listed Canadian exploration company actively engaged in the acquisition, evaluation and exploration of uranium mineral properties in northeastern and northwestern Ontario, Athabasca Basin and Western Newfoundland, Canada.
